ORIGINAL STUDIES

Is the level of vitamin D deficiency correlated with the severity and bilaterality in slipped capital femoral epiphysis? A case series study, Shady Elbeshry et al. .......................................................... 217

Long-term outcome of extraarticular subtalar arthrodesis in children with cerebral palsy using modified Grice technique, Jiri Jochymek, Tereza Peterkova .................................................. 223

Assessment of early Achilles tenotomy in the newborn idiopathic pes equinovarus, Ersin Mutlu et al. .................................................................................................................. 231

Reliability of radiological measurements and treatment recommendations of displaced paediatric humeral medial epicondyle fractures, Christoph Arneitz et al. ................................................................. 237

Pediatric distal humeral supracondylar fracture – achievement of optimal pinning configuration, Han Hong Chong, Assad Qureshi ................................................................................................ 245

Quantitative gait analysis in children with osteogenesis imperfecta: relationship between gait deviations and clinical features, Solange De Wouters et al. ......................................................... 255

Open reduction in treatment of neglected elbow dislocation in children, Ahmed El Mouloua et al. ........................................................................................................................................ 263

The management of orthopedic trauma surgery during the COVID-19 pandemic in Turkey, Ortac Guran et al. ........................................................................................................................................ 269

The effect of transitional vertebrae and spina bifida occulta on disc herniation, disc degeneration, and end-plate changes in pediatric patients with low back pain, Ozge Gulsum Illeez et al. ...... 275

Zero-profile implant versus integrated cage-plate implant in treatment of single level cervical disc disease, Mohammed Zayan Ibrahim et al. .................................................................................. 285

Impact of job characteristics on return-to-work interval following arthroscopic partial meniscectomy, Jef Van Doninck et al. .................................................................................................. 293

The survivorship of revision total hip replacement with severe proximal bone deficiency using 15 modular taper fluted prosthesis, Siddharth Govilkar et al. ........................................................................ 303

Hip fracture specialists facilitate low-dose spinal anaesthesia in fractured neck of femur surgery, David E. Brooks et al. ........................................................................................................... 311

Total knee arthroplasty for acute tibial plateau fractures: a survey amongst 68 Dutch orthopaedic surgeons, Mees K. Hesmerg et al. ........................................................................................................ 319

Mid-term outcomes of posterior capsular release for fixed flexed deformity after total knee arthroplasty, Theofylaktos Kyriakidis et al. ................................................................................................ 329

The addition of oral Tranexamic acid to knee arthroplasty patients does not further improve blood loss: a double blinded randomized control trial, Ciaran McDonald et al. .......................... 335

Tibial cancellous bone auto-grafting for medial open-wedge high tibial osteotomy: bone void filling with tissue harvested from osteotomized medullary canal, Cumhur Cevdet Kesemenli et al. .......... 342

Quadriceps tendon vs hamstring autograft in primary ACL reconstruction – a comparative study with minimum two-year follow-up, Maria Victoria Pomenta Bastidas et al. ........................................ 347

Are running stitches needed in DT4 Single Anteromedial Bundle Biological Augmentation transplant preparation ?., Maxime Huard et al. .................................................................................... 355

Comparison of the WALANT and the PFNB techniques in the surgical treatment of unimalleolar fractures: a prospective study, Ceyhun Çağlar et al........................................................................ 359
